3. Computation of the complementary siphons of Strict Minimal siphons

For the complementary siphons' computation $[S_i]$, we initially recognize the places r indicating the resources of our system on S_i . Then, we continue with the computation of the holders $H(r)$ of the resources which equals to the difference of multi-sets I_r from their corresponding places r , $H(r) = I_r - r$. The complementary set $Th(S)$ is finally computed by the difference of the sum of holders, referring to the corresponding resources, from the rest of operation places included in S , formally $Th(S) = \sum_{r \in S^R} H(r) - \sum_{r \in S^R, p \in S^A} I_r(p)$.
